About the NEW 2017 Quadrennium Reports

The Quadrennium Project provides a projection of likely religious beliefs, preferences and practices for a defined study area. It is based upon the Quadrennium Project national survey conducted by MissionInsite every five (5) years. While general religious data is available through various organizations, only MissionInsite can provide local geography projections that are current. This report is based upon the 2017 Quadrennium Survey; the most recent following the initial 2012 survey.

There are two reports in the Quadrennium Survey series for 2017. The first report is called ReligiousInsite. It provides insights into community beliefs and religious preferences. The second report is called MinistryInsite. The focus of this report is on practical applications of the 2017 survey. It includes life concerns, reasons for non-participation or considered non-participation in a religious congregation or community and a list of preferred ministries or programs--all of which is based upon the very specific profile of the study area. One final innovation for this survey version is the "Priority Lists". Using MissionInsite analytics, very customized priority lists zoom the reader right into the heart of study area concerns, program and ministry preferences and more.

Additionally, there are two reports that capture just the priorities of some survey questions based upon strengths of beliefs plus the direction of the beliefs, whether towards agreement or disagreement. These two reports correspond to the fuller reports. The first is the ReligiousInsite Priorities Report and the second, the MinistryInsite Priorities Report. These priority lists are all found in the fuller reports.

Interpreting the Report

The Quadrennium Project reports are formatted to help you interpret data at a glance.

Comparative Indexes: All variables will have a column called "Comparative Index." An index is an easy way to compare a study area with a larger area. For this report, all comparisons are with the national averages for the data item. The indexes can be interpreted as follows.

- Indexes of 100 mean the study area variable is the same as its base area.
- Indexes greater than 100 mean the study area variable is above the base area. The higher the number, the greater it is above the base.
- Indexes less than 100 mean the study area variable is below the base area. The lower the number, the greater it is below the base.

Ratio: Calculated using Somewhat Agree + Strongly Agree divided by Somewhat Disagree + Strongly Disagree

Color Coding: The "Comparative Indexes" columns are color coded to easily spot any change and the direction of that change.

Index: Above Ave Ave Below Ave.
